

Good or bad?

HTML.pm

```
sub table_builder {  
    my $row_builder = shift;  
    my $sth          = shift;  
  
    $sth->execute;  
  
    return sub {  
        say "<table>";  
        while (my $row = $sth->fetchrow_hashref) {  
            $row_builder->($row);  
        }  
        say "</table>";  
    };  
}
```
