

Good or bad?

HTML.pm

```
sub to_html {
    my %args = @_;

    html_start(%args);

    $args{sth}->execute;

    say "<table>";
    while (my $row = $args{sth}->fetchrow_hashref) {
        say "    <tr>";
        for my $col (@{ $args{columns} }) {
            say "        <td>" . $row->{$col} . "</td>";
        }
        say "    </tr>";
    }
    say "</table>";

    html_end();
}
```
