

create subdomain

## Create a Subdomain

*For example, if your domain is example.com, a sub-domain of that might be support.example.com.*

.

**Home folder (aka Document Root) for your subdomain:** /public\_html/

Create

# Create subdomain request

```
POST /subdomains/test2.example.com
Content-Type: application/json
```

```
{
  "target-path": "test2",
  "redirect": null
}
```
