WebSockets

```
websocket '/echo' => sub {
    my $c = shift;
    my $conn = $c->tx->connection;
    $c->broadcast("($conn has joined)");
   $c->on(
        text => sub {
            my ($c, $message) = @_;
            my $conn = $c->tx->connection;
            $c->broadcast($conn . ": " . $message);
```

Test::Mojo

```
use Test::Mojo;
use Test::More;
my $t = Test::Mojo->new;
$t->get_ok('http://mojolicious.org')
  ->status_is(200)
  ->text_like('div#wrapperlicious h1' => qr/Perl/);
$t->get_ok('https://api.twilio.com/2010-04-01.json')
  ->status is(200)
  ->json_is('/subresource_uris/accounts' => "/2010-04-01/Accounts.json");
done_testing();
```
