Poor Man's Validation

```perl
my $obj = decode_json $json;

if (exists $obj->{user}) {
    unless ($obj->{user}->{login} and
    $obj->{user}->{id} and
    $obj->{user}->{id} =~ /^\d+$/ and
    $obj->{user}->{type} and
    $obj->{user}->{type} =~ /^(?:user|admin|passer-by)$/) {
        die "User is not well-formed!";
    }
}
```

JSON Schema

- mostly stable

- some backward-incompatible changes between revisions
