Good or bad?

HTML.pm

```perl
sub table_builder {
    my $row_builder = shift;
    my $sth         = shift;

    $sth->execute;

    return sub {
        say "<table>";
        while (my $row = $sth->fetchrow_hashref) {
            $row_builder->($row);
        }
        say "</table>";
    };
}
```
